Our services involve advanced assessments and in-depth screenings, which are designed to determine the health and condition of babies before birth, and to begin evaluating treatment options so that parents can be as prepared as possible following birth.

Vision

Midwestern University Eye Institute

5865 W. Utopia Rd., Glendale
623-537-6000

mwuclinics.com

Midwestern University Eye Institute is your source for affordable, comprehensive eye care for the entire family. We can help your child learn more effectively. Did you know that clear eyesight is only one of the 17 visual skills needed for reading, learning, and sports success? Vision therapy is a highly effective non-surgical treatment for many common conditions such as lazy eye, crossed eyes, double vision, convergence insufficiency, and certain reading and learning disabilities. Basic vision screenings only test a few of the visual skills and do not check for ocular health. A child's first comprehensive eye exam can be done as early as six months.
